

CHOOSING THE BEST LENS FOR YOUR CATARACT SURGERY

OPTION 1: DISTANCE ONLY

A **monofocal lens** corrects vision at a distance.

- May need glasses for near and intermediate activities
- Does not include astigmatism correction or range of vision

Covered by insurance

OPTION 2: ASTIGMATISM CORRECTION

A **toric lens** provides enhanced clarity at a distance

- May need glasses for near and intermediate activities
- Reduces dependence on glasses at a distance

\$1,500 per eye

OPTION 3: PRESBYOPIA CORRECTION

A **trifocal lens** provides a range of vision: near, intermediate and distance.

- Includes astigmatism correction, if necessary
- Reduces dependence on glasses at all distances

\$2,500 per eye

OPTION 4: PERSONALIZED VISION

A **light adjustable lens** allows for fully customizable vision following surgery.

- Best possible vision; significantly reduces dependence on glasses at all distances.
- Includes astigmatism correction, if necessary.

\$4,000 per eye
